Abel Ghebrezadik

Lead / Senior Software Engineer · C# / .NET · Python · AWS · TypeScript · React

London | +44 7527 841324 | abelghebz@gmail.com | linkedin.com/in/abel-ghebrezadik | github.com/abeallin | abelghebz.com

Profile

Lead / Senior Software Engineer with 10 years' experience building full-stack systems and products across finance, property, health and gambling. Specialist in C# and .NET on AWS serverless (Lambda, API Gateway, SNS/SQS) and increasingly a technology generalist: Python and Go on the backend, TypeScript, React, Angular and Next.js on the front end, and AI features on AWS Bedrock. Led the backend of a £500k-jackpot multiplayer game, via Betmate, that scaled to 1 million users, and was technical lead on a project that saved SalaryFinance millions in fines. Leads greenfield builds, clears legacy tech debt and mentors engineers, in permanent and contract roles. BSc Mathematics, University of Southampton.

Technical Skills

Languages: C#, TypeScript, JavaScript, Python, Go, Java, C++, SQL

Backend: .NET 8 / .NET 6 / .NET Framework, Node.js, REST APIs, gRPC, GraphQL, microservices, distributed systems, event-driven architecture, CQRS, DDD, Dapper

Frontend and mobile: React, Angular, Next.js, Vue.js, Blazor, Tailwind CSS, React Native, Expo, Kotlin (Android), Swift (iOS), Flutter

Cloud and DevOps: AWS (Lambda, Bedrock, API Gateway, SNS, SQS, CloudFormation), serverless, Azure, Docker, Terraform, GitHub Actions, CI/CD, Railway, Vercel, Cloudflare

Data: MSSQL, PostgreSQL, MySQL, CockroachDB, Snowflake, MongoDB, SQLite, Redis, Kafka

Testing and tooling: Unit testing, Playwright, Selenium, Sentry, Datadog, Jira, Confluence

Ways of working: Agile, technical leadership, mentoring, AI-assisted development (Claude, GitHub Copilot, Cursor)

Work Experience

Full Stack Developer

Arena Entertainment | Dec 2025 – Present | Crypto gambling platform

Tech: C#, .NET, Node.js, TypeScript, Angular, React, AWS Bedrock, AWS Lambda, Snowflake, MySQL, Redis, Kafka, gRPC, GraphQL

- Cut average API latency from 14s to 2s with Lambda warm-up pings and provisioned concurrency to remove cold starts (94% hit rate).
- Rebuilt a five-year-old Angular frontend into a modern UI based on Cloudflare's designs, improving page-load speed, with standardised patterns and strict adherence to frontend principles.
- Built an AI conversational assistant on AWS Bedrock used by 200 people, cutting onboarding time and Slack and Jira requests for information.
- Wrote 250 pages of in-app documentation to triage customer-ops questions, with how-to guides and permissions and access guidance.
- Improved Snowflake and MySQL query processing by 50% and changed GET lookups from O(n) to O(1).
- Added Redis batch pipelines and rebuilt data tables with keyset (cursor) pagination, making tables with billions of records retrievable.
- Built a regression-test automation app that runs UI tests with Playwright, traces Bitbucket PRs to create test cases, and integrates with Claude through an MCP server I built.
- Rebuilt the internal admin platform in C#/.NET and React with DDD, CQRS over Kafka, gRPC between services and a GraphQL API, migrating the old system function by function with AI agents that planned the work into Linear tickets, built it and reviewed the pull requests.

Lead / Senior Software Engineer

Betmate | Apr 2025 – Jul 2025 | Multiplayer game for a leading sports betting company

Tech: C#, AWS Lambda, MediatR, API Gateway, SNS/SQS, CloudFormation, CockroachDB, Dapper

- Led the backend of Final One Standing, a multiplayer game for a leading sports betting company with a £500k jackpot, scaled to 1 million users.
- Designed a high-performance C# backend on AWS Lambda (serverless) for scalability and cost efficiency.
- Integrated CockroachDB through Dapper, tuned for distributed SQL performance and lightweight data access.
- Built an event-driven architecture on SNS and SQS, with CI/CD and infrastructure as code (API Gateway, Lambda, CloudFormation).
- Drove community outreach: built a list of podcasts, clubs and influencers and introduced the game to Premier League to non-league clubs and podcasts with 50–215k followers.

Software Engineer (Contract, outside IR35)

NHS England | Dec 2024 – Feb 2025

Tech: Python, Selenium, Next.js, Tailwind CSS, Electron, TypeScript, Playwright

- Automated bulk creation and deletion of message templates in Accurx, a third-party application, for GP practices in North Central London (NCL), cutting a template sweep from 4 hours of manual work to 4 minutes.
- Delivered the first version as a Python and Selenium desktop app, then rebuilt it as GPFlow: a Next.js and Tailwind app shipped as an Electron desktop app and a web app, driving Accurx with Playwright.

Algorithm Tutor

Titanium Tutors | Nov 2024 – Apr 2025 | Self-employed

Tech: Python

- Tutored university graduates in algorithms in Python, preparing them for internship technical tests.

Senior Software Engineer

Fvtvre | Apr 2024 – Jul 2024 | KSA PropTech startup

Tech: .NET 8, C#, microservices, REST APIs, Vue.js

- Built a .NET 8 microservice API and Vue.js front end for a B2B property management product.
- Rolled the product out to EJAR, the Saudi department of rent, improving its inventory assessment of properties.

Senior Software Engineer

SalaryFinance | Aug 2021 – Apr 2024 | B2B and B2C loans and salary advance, FCA Consumer Duty compliance

Tech: C#, .NET 6, microservices, TypeScript, Vue, Python, MySQL, MSSQL

- Technical lead on Project Tahiti, a critical project that saved the company millions in fines; reported to the leadership team on implementation, outcomes and next steps.
- Resolved 500+ production issues in 6 months, 80% faster than other engineers, meeting OLAs and unblocking new feature development (a company OKR).
- Built front-end and back-end features for customer operations and fixed root causes of recurring issues in key microservices.
- Mentored junior engineers, covered Lead Developer duties and wrote the processes and playbooks the team shared knowledge through.
- Created the backend logic for the debt sale implementation, wrote its documentation and presented the application to an external client.

Senior Software Engineer

Optal (acquired by Wex) | May 2018 – Apr 2021 | B2B virtual card payments for travel

Tech: C#, .NET, WinForms, WPF, MSSQL

- Built desktop applications for an accounts system that reconciled, monitored and settled payments.
- Monitored millions of daily Expedia and Booking.com transactions, reconciled against Ixaris and Mastercard data.
- Settled transactions across 50+ bank accounts in multiple currencies for 10 international entities.

IT Consultant (Junior Software Engineer)

FDM Group, contracted to the London Metal Exchange | May 2016 – May 2018

Tech: C#, .NET, C++, Java, Perl, PowerShell

- Developed MiFID II regulatory reporting APIs in C#/.NET.
- Built a SOAP API for internal staff to retrieve company data, and new features in C++, Java and C#.
- Scripted in Perl, PowerShell and Batch on legacy systems.

Projects

perfectrole.app | Own product, 2026 | perfectrole.app | Case study

- Direct-to-employer job index and salary intelligence platform indexing 135,000+ live roles from 1,644 company ATS feeds across 18 hubs, with regional P25–P90 pay benchmarks and a double-opt-in Talent Vault (OAuth 2.0, GitHub proof-of-work, 1-click pitch inbox). TypeScript, Next.js, Tailwind CSS, WAL-tuned SQLite, Stripe GBP billing, on Railway.

cabeazy | Own product, Mar 2026 – Present | cabeazy.com | Case study

- Ride-hailing platform for London (pre-launch) where drivers pay a flat monthly fee and keep 100% of every fare. Sole developer.
- Go API on PostgreSQL, Redis and NATS with a contract-first OpenAPI /v2, Stripe payments, WebSockets and a retry-safe job queue; React Native passenger and driver apps, a native Kotlin Android app under way and a Swift iOS app to follow, and a Next.js site and operator portal.

whenwillyoumarry.com | Own product | whenwillyoumarry.com | Case study

- Wedding website builder with templates, a live-preview editor, RSVPs, a drag-and-drop seating chart and email and SMS broadcasts. TypeScript, Next.js, PostgreSQL with Drizzle, Redis, Stripe, Cloudflare R2, on Railway.

GPFlow | NHS England | Case study

- Bulk Accurx template management for GP practices in North Central London: one Next.js and Tailwind app shipped as an Electron desktop app and a web app, with Playwright driving Accurx, SQLite storage and MongoDB licence checks.

Education

University of Southampton

BSc Mathematics (2:1) | Oct 2009 – Jun 2013

Woodhouse College

A-Levels: Mathematics (A), Economics (A), Sociology (B) | Aug 2007 – Jun 2009

Interests

Building websites and apps for my own ventures, DJing and making music mixes, and endurance challenges: Hackney Half Marathon, London Olympic Triathlon and Tough Mudder.
